MARCH 2002

HISTORICAL AIR FORCE CONSTRUCTION COST HANDBOOK

TABLE OF CONTENTS

- I. GENERAL INFORMATION AND DEFINITIONS**
- II. HISTORICAL DATA BY FACILITY TYPE**
- III. HISTORICAL DATA BY CATEGORY CODE**
- IV. SIZE ADJUSTMENT**
- V. ESCALATION TABLES**
- VI. LOCATION FACTORS**
- VII. SUPPORTING FACILITY UNIT COSTS**
- VIII. SIOH, CONTINGENCIES, AND ROUNDING**

SECTION I

GENERAL INFORMATION AND DEFINITIONS

SECTION ONE

GENERAL INFORMATION AND DEFINITIONS

GENERAL INFORMATION

The Historical Air Force Construction Cost Handbook is prepared by the Directorate of Technical Support, HQ AFCESA/CESC, to provide valid historical costs used in preparing cost estimates and analyses for Air Force construction. Much of the data found in this handbook is also found in the Automated Air Force Pricing Guide (AAFPG), and updates are made annually. The document is intended to be used as a supplement to the AAFPG, but will be a special help to those locations that do not have the AAFPG installed or do not have computer capability.

Prices for OSD Common Facilities, Area Cost Factors, escalation rates, and the size adjustment curve are from the OSD Pricing Guide. Data for AF Unique Facility Costs, Supporting Facility Costs, and Supporting Facility Percentages are from AF Historical data in the Program, Design, and Construction (PDC) system; DD Forms 1391, the Parametric Cost Engineering System (PACES); or from detailed quantity take-off estimates from typical designs.

The historical costs are carefully purged to ensure the correct data is listed. Projects with unusual costs often turn out to be additions, alterations, or add/alter projects and are not used in the database. Other reasons might include bidding climate, special items included that are not normally a part of the facility, or peculiar conditions at a certain location; sometimes no explanation can be found.

Facilities with no historical database are listed as "USER" facility types in the category code listing. These facilities are frequently coded improperly and require change, relocation, or deletion. Although very little data is available for these facility types, they are placed under the category code listing for completeness.

Another feature is the use of the metric system. Data is presented in both English and Metric units. A conversion chart is provided in this section to help make the proper conversions when required.

This handbook is used by the Tri-Service Cost Engineering Committee as the Air Force input to determine DoD common facility unit prices and average sizes. Costs and sizes are mutually agreed upon by the three services and submitted to OSD for approval. Upon receipt of the OSD approved unit costs and sizes, the handbook and the AAFPG are updated. Facility Types marked with an asterisk (*) are Air Force unique. Unmarked facilities are from the OSD Pricing Guide.

The handbook is on the Internet at the HQ AFCESA Homepage (<http://www.afcesa.af.mil>)

SECTION ONE
GENERAL INFORMATION AND DEFINITIONS
DEFINITIONS OF TITLES ON HISTORICAL SUMMARY LISTING

1. **FACTYPEA:** Facility identification by type. Facility types marked with an asterisk (*) represent Air Force unique facilities. DOD common facility types have no special markings in the list. Facilities with little or no historical cost are classified "USER".
2. **AVGUM:** An average of the unit of measure (UM), usually square feet (SF) or square meters (SM), used to compute size adjustment for a facility. This item factors in economy of scale in the cost of a facility.
3. **UM:** The unit of measure used to define the size and cost of a facility. Costing a facility by \$/UM is a form of parametric estimating.
4. **OSD \$/UM:** Tri-service approved "DOD Common" unit prices found in the Historical summary listing *without* an asterisk (*). These unit costs are also found in the Automated Air Force Pricing Guide (AAFPG).
5. **AF History \$/UM:** The Air Force historical average unit price for new facilities. The primary facility cost is normalized to October 2004, the estimated midpoint of construction for FY 2004 construction projects. Supervision, Inspection, and Overhead (SIOH), supporting facilities, and contingency cost have been extracted from the unit prices shown.
6. **Std Dev:** The standard deviation of the average cost/unit (\$/UNIT). A standard deviation of less than 10% of the \$/UNIT is excellent, between 10 and 20% is good, and over 20% bears additional scrutiny. However, some facility types will naturally have a large range due to their variance for different missions, etc.
7. **CWE/PA:** Ratio of the Current Working Estimate (CWE) to Programmed Amount (PA).
8. **SUP %:** Average supporting facility percentage. The percentages are derived from historical records taken from the Programming, Design and Construction (PDC) system.
9. **#REC:** The number of records in the database used to obtain historical costs.

Notes:

1. The CATCODE column will only display the first computer generated category code, even though a facility type may include multiple codes.
2. OSD \$/UNIT and AF HISTORY \$/UNIT are both included in this handbook to provide the user a means of comparison from the OSD price found in the Air Force Pricing guide to the actual AF historical price. The estimator's judgment is required when deciding which price to use.
3. These unit costs are forecast to a midpoint of construction of 1 October for the respective fiscal year with an Area Cost Factor (ACF) of 1.00. Unit costs do not include contingencies and SIOH.
4. Unit Costs include installed (built-in) building equipment and furnishings normally funded with MILCON funds.
5. Unit costs for DOD Medical facilities include Category A and B equipment, but do not include Category E and F equipment costs.
6. Unit costs for Administrative Facilities do not include Pre-wired workstations or furniture systems.
7. Unit costs for Dormitories and Unaccompanied Officers Quarters do not include freestanding kitchen equipment.

8. Unit costs for Child Development Centers do not include freestanding food service equipment or playground area and equipment.
9. Unit costs for Family Housing are based on Gross area and include costs for sprinkler systems or fire rated construction.
10. Unit costs shown in this document do not include Anti-Terrorism/Force Protection cost.

DEFINITIONS OF TITLES ON DETAILED LISTINGS

1. **FACTYPE:** Facility identification by type. Facility types marked with an asterisk (*) represent Air Force unique facilities. DOD common facility types have no special markings in the list. Facilities with little or no historical cost are classified "USER".
2. **CATCODE:** Facility identification by number. Air Force category code numbers are comprised of six digits with a hyphen in the middle.
3. **DESCRIPTION:** A brief description title or nomenclature of the facility.
4. **SCOPE:** Award scope with additives.
5. **UM:** The unit of measure used to define the size and cost of a facility. Costing a facility by \$/UM is a form of parametric estimating.
6. **TYPE:** The type work, e.g. New, Add, Alter, or ADAL.
7. **\$/UNIT:** Cost per unit for new facilities. The primary facility cost is normalized to October 2004, the estimated midpoint of construction for FY 2004 construction projects. All SIOH, supporting facilities, and contingency costs have been extracted.
8. **CWE/PA:** Ratio of the Current Working Estimate (CWE) to Programmed Amount (PA).
9. **SUP %:** Average supporting facility percentage. The percentages are derived from historical records taken from the Programming, Design and Construction (PDC) system.
10. **FY:** Fiscal Year.
11. **AWARD:** Contract award date of the construction project.
12. **BASE:** Air Force Base name.
13. **PDCNUMBER:** Program, Design, and Construction (PDC) number used to identify projects on the DD Form 1391.

METRIC/ENGLISH SYSTEMS

ABBREVIATIONS:

AC - Acre
ACC - Air Combat Command
ACF - Area Cost Factor
ADD - Addition
ADAL - Addition Alteration
AF - Air Force
AFDW - Air Force District of Washington (Bolling)
AFMC - Air Force Material Command
ALTER - Alteration
AMC - Air Mobility Command
AVG - Average
BL - Barrel
CATCODE - Category Code
CF - Cubic Feet
CONUS - Continental United States
CWE - Current Working Estimate
CY - Cubic Yard
EA - Each
FACTYPE - Facility Type
FY - Fiscal Year
DOD - Department of Defense
EA - Each
GA - Gallon
HE - Hectare
HM - Hectometer
KW - Kilowatt
L - Liter
LF - Linear Feet
M2 - Square Meter
M3 - Cubic Meter
M - Meter
MILCON - Military Construction
OCONUS - Outside Continental United States
OL - Outlet
OMB - Office of Management and Budget
OSD - Office Secretary of Defense
PA - Programmed Amount
PDCNUMBR - Program Design & Construction Number
REC - Records
STD DEV - Standard Deviation
SF - Square Feet or Supporting Facility
SIOH - Supervision Inspection Overhead
SP - Spaces
SUP or SUPP - Supporting
SY - Square Yard
UM - Unit of Measure

SECTION IV

SIZE ADJUSTMENT

SECTION IV

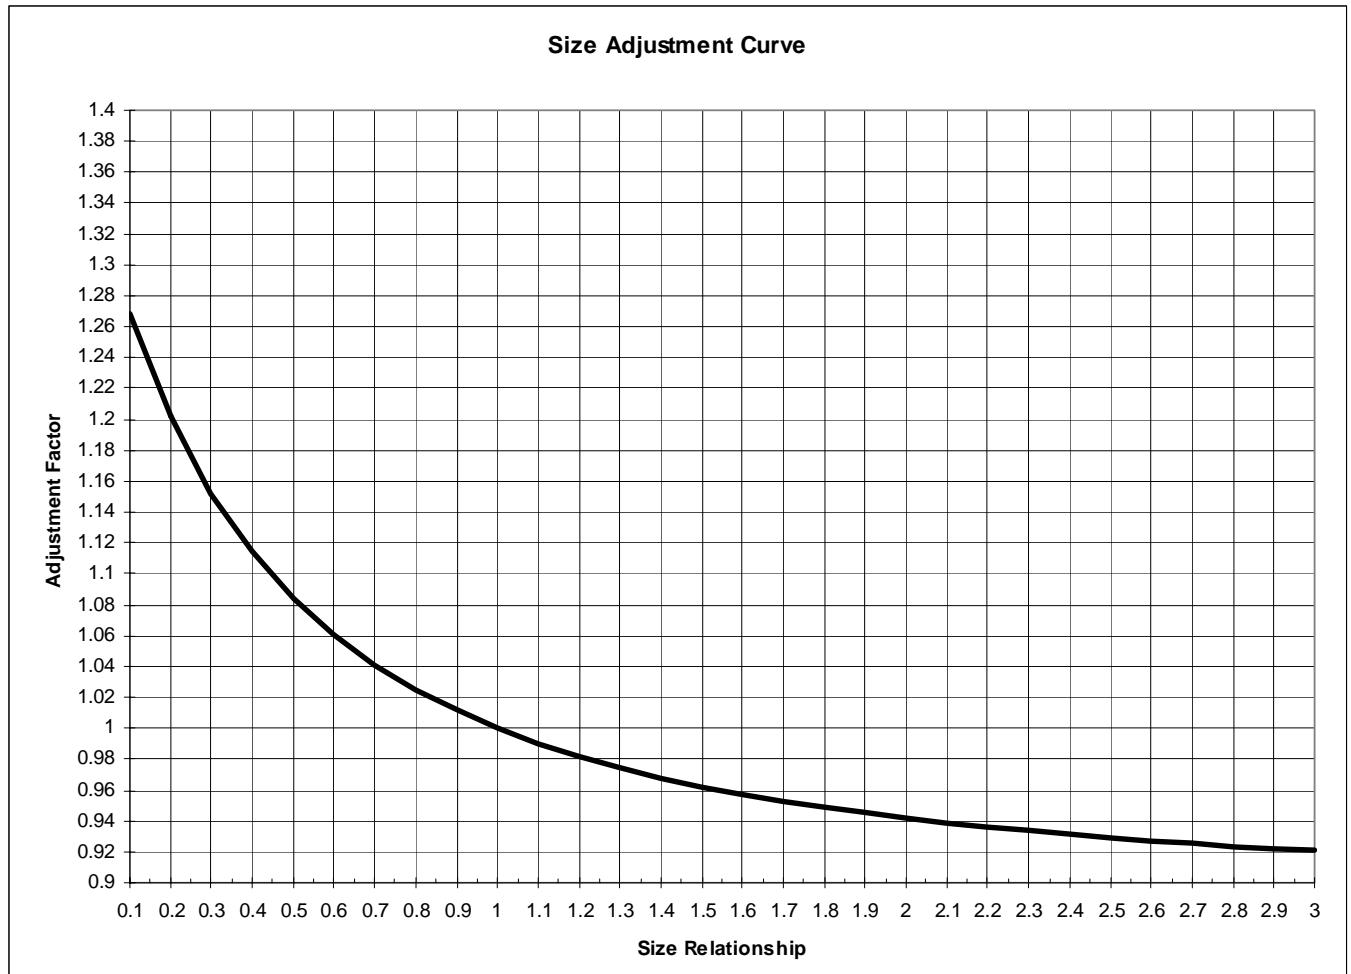

SIZE ADJUSTMENT

The following chart is used to adjust unit prices for facilities where size differs from typical sizes listed in the historical cost summaries.

AREA RELATIONSHIP

Determine the relationship of the proposed building by dividing the gross area by the typical size as shown in historical cost summary listings. Locate the quotient on the "Size Relationship" scale and trace vertically to the "Factor Line", then trace horizontally to the "Adjustment Factor" scale. The resulting value is then multiplied by the unit cost as listed in the historical cost summaries.

EXAMPLE: You propose to build a 1,200 square meter Airman Dining facility. The standard or typical size is 2,000 square meters as taken from the historical cost summaries. From the chart, the "Size Relationship" is $(1,200/2,000)=0.60$. The size "Adjustment Factor" from the chart is 1.06. Therefore, the size-adjusted cost is $1.06 \times \$2,530.00$, which equals \$2,682.

SECTION V

ESCALATION TABLES

SECTION V

ESCALATION TABLES

The attached escalation tables are based on Office of Management and Budget (OMB) inflation forecasts for military construction (3300 appropriation). The first table has been normalized to October 2004. *The second table shows the Engineering News Record (ENR) Building Construction Index (BCI) through October 2001 and the ENR BCI adjusted by the current OMB escalation indices for dates beyond October 2001.*

The midpoint of construction is determined by figuring the total construction time and dividing by two. For example, if the construction time were 16 months, starting in August 2004, the midpoint of construction would be April 2005.

An **example** of using the first escalation table is as follows:

Assume your project has an April 2005 mid-point of construction, based on a construction start date of August 2004 and a 16-month construction period. The Escalation Table inflation index for your project is 1.009 for April 2005. Calculate your inflation adjustment percentage by dividing the inflation index for your project by the inflation index for the unit cost data (October 2004), or 1.009 divided by 1.000 = 1.009. Multiply the FY2004 unit cost by 1.009 to determine the adjusted unit cost for your project.

Additional information may be obtained by calling Mr. Wes Hammond, HQ AFCESA/CESC, at DSN 523-6261.

SECTION VI

LOCATION FACTORS

SECTION VI

LOCATION FACTORS

Location Factors or Area Cost Factors (ACF) are used by all DoD services to adjust average historical facility cost to a specific project location. This allows increased accuracy in identifying project costs during initial project submissions or when specific design information is not available. The attached listing is based on the latest Tri-Service recommended changes dated 5 March 2002. The area cost factor index takes into consideration the cost of construction material, labor and equipment, and other factors such as weather, climate, seismic conditions, mobilization, overhead and profit, labor availability, and labor productivity for each area.

SECTION VII
SUPPORTING FACILITY UNIT COSTS

SUPPORTING FACILITY UNIT COSTS

General: With the exception of airfield construction, supporting facility costs are based on quantities typical of the average building site and should be used with this in mind. If an estimate is required for a construction project that includes a significant quantity of any single item, either new unit prices should be developed, or these prices should be adjusted to fit the size of the project. Normal soil conditions, a readily accessible work site, and regular working hours are assumed. Adjustments are required for unstable soils or rock, access to remote work sites, compressed construction schedules, confined work spaces, and any other unique condition or circumstance.

ELEC OH - ELECTRIC OVERHEAD DISTRIBUTION SYSTEM

Overhead lines include all costs to furnish and erect the structures and furnish, install, and terminate the conductors. Switch gear, substations, and transformers are excluded.

ELEC UG - ELECTRIC UNDERGROUND DISTRIBUTION SYSTEM

Underground electrical costs include all excavation, backfill, PVC conduit, concrete encasement, cables, cable terminations at each end, and cable location markings. Average depth of burial is 3.5 feet. Switch gear, substations, and transformers are excluded.

ELEC TRANS - ELECTRIC TRANSFORMER/SUBSTATION

Transformer costs include all work and equipment to install the transformer, transformer foundation, and cable terminations.

ELEC GEN - EMERGENCY GENERATORS

Emergency generator costs include prepackaged diesel driven sets with transformer switch, battery, battery charger, and fuel tank. Connection to the building electrical system is excluded.

ELEC LIGHT - EXTERIOR SECURITY LIGHTING SYSTEM

Lighting costs include all work and equipment to install an operable lighting system with all poles, fixtures, transformers, and underground cables in place. Excluded are electrical requirements outside the right of way or parking area.

ELEC UPS - UNINTERRUPTABLE POWER SUPPLY SYSTEM

Static UPS systems include prices of UPS system sizes that would normally be used at Air Force installations. Three sizes are priced without batteries. Batteries with a 30 minute capacity are priced separately for each of the three sizes. UPS systems and components are generally paid for with 3080 funds.

WATER - WATER LINE

The prices for water line construction include all costs normally incurred in the installation of pressure piping systems to include excavation, backfill, truss blocks, pipe materials with minimum fittings, pressure testing, and chlorination of the system.

WATER TANK -

CONCRETE RESERVOIR CAVITY: Unit cost includes 150mm (6") concrete floor slab, ordinary excavation, and piping within the reservoir.

STEEL WATER TOWER: Unit cost includes tank, standpipe, 38m (125') tower, valves, and standard foundations. Piping, pipefittings, valves and pumps are excluded.

SEWER - SANITARY

Prices include excavation, bedding, piping, fittings, and backfill. Manholes are costed separately and include the total cost of installation. Lift station prices include pumps, sumps, internal piping, electrical equipment, valves, meters, and associated equipment needed for an operable pumping station. Costs do not include electrical service or force mains.

SEWER - STORM

Prices include excavation, bedding, piping, fittings, and backfill. Manholes, drop inlets, and catch basins are costed separately and include the total cost of installation of these items.

GAS LINE - GAS DISTRIBUTION SYSTEM

Buried pipe prices include standard pipe with minimum fittings, excavation and backfill. Cost of threaded or welded joints, protective coatings, insulation, and testing are included in the items as appropriate to their size and intended use.

STEAM LINE -

INSULATED STEAM AND CONDENSATE PIPE IN COMMON CONDUIT BRANCH SUPPLY AND RETURN IN COMMON CONDUIT: Unit cost includes accessories, 1m (3'-0") excavation, backfill and testing.

INSULATED STEAM OR HIGH TEMP HOT WATER PIPING (Supply or Return): Single pipe in conduit (underground). Unit cost includes fittings and accessories, backfill, and testing.

MANHOLE: Steam prefab steel 2.5 meters (8') diameter, 2 meters, (6') deep: includes ladder, conduit vent, MH vent, normal piping and installation. Precast concrete, 2 meters (6') diameter, 2.5 meters (8') deep with cover: Includes ladder, conduit vent, MH vent, normal piping and installation.

COMM DUCT - COMMUNICATIONS DUCTS

Communications duct costs include PVC, conduit, excavation, concrete encasement, backfill and telephone cables. Also included in the cost is a spare conduit run of equal size for each application. Average depth of burial is 3.5 feet.

SITE IMPRV - SITE IMPROVEMENTS

Clear and grub prices include trees to 150-mm (6") diameter. Disposal is by chipping or burn/bury. Where the units are Acres (AC), the metric equivalent is Hectare (HE).

FENCING -

Fence prices are for average site requirements. They should be increased if an unusual number of gates or special gates are required.

ROADS -Cost for roads include clearing, grubbing, excavation, compacted subgrade, base preparation, surfacing, and minimum drainage structures. Roadway lighting is excluded.

PARKING - PARKING LOTS

Parking facilities are costed per space (SP) and include excavation, subgrade compaction, base preparation, surfacing, and drainage structures. Parking lot lighting is excluded. The average number of SF per space is 980 SF.

SIDEWALK - Sidewalk costs include excavation, subgrade compaction, concrete, welded wire fabric, backfill, and cut disposal.

AFLD SITE - SITE WORK FOR AIRFIELDS

Airfield clearing, grubbing, and drainage costs are based on slightly rolling terrain, with a 50mm (2") average monthly rainfall. Clearing and grubbing includes stripping away the top 100-150 mm (4 to 6 inches) of soil and does not include tree removal or other obstructions.

AFLD BASE - SUBGRADE/SUBBASE/BASE WORK FOR AIRFIELDS

Airfield base preparation costs are shown for heating degree days (HDD), and the temperate zones are matched to those used for energy requirements as zone A, B, C, and D as shown in the following table. Existing soil is assumed to have a California Bearing Ratio (CBR) of 10.

| Zone | HDD | BASE DEPTH ("") |
|------|---------------------|-----------------|
| A | 0-3000 | 18" |
| B | 3000-6000 | 36" |
| C | 6000-9000 | 54" |
| D | above 9000 = Arctic | >54" |

AFLD PAVE - AIRFIELD PAVEMENTS

Prices for airfield pavements include all costs to furnish and place surface materials for airfield base preparation including Portland cement concrete, asphalt pavements, reinforcing steel and mesh, formwork, construction joints, and expansion joints. Costs are based on medium traffic in weather zone A.

AFLD MISC - AIRFIELD MARKINGS

Includes material, labor, and equipment required to stripe airfield pavements. Price includes routine surface preparation and not complete removal of lines and markings. The price for airfield markings is based on total paved areas.

DEMOL BLDG - DEMOLISH BUILDING

Building demolition prices include the cost of hauling off rubbish to 8 km (5 miles). The salvage value of steel buildings is considered. Dumping fees are included.

DEMOL PAVE - DEMOLISH PAVEMENTS

Pavement demolition prices include the cost of hauling debris 8 km (5 miles). Dumping fees are included. Costs for concrete demolition are based on relatively small areas using jackhammers or hoerams.

ASBESTOS - ASBESTOS REMOVAL

The cost for removal of typical asbestos material includes floor covering, wall/ceiling finishes, pipe insulation, and mechanical room finishes. The intended situation is when the entire structure requires treatment. Other prices for asbestos removal are to be applied when treatment is confined to a specific area. Prices are based on historical averages.

WORKSTA - PREWIRED WORKSTATION

Costs are based on a prewired workstation including all partitions, work surfaces, shelving, storage units, wiring, and hardware for a complete workstation.

FIREPROT - SPECIAL FIRE PROTECTION SYSTEMS

Typical prices are provided for special Fire Protection systems such as AFFF when they are required for special reasons and not normally included in a building.

SHIELDING -

Tempest and HEMP shielding prices are per square foot of contact area in typical fixed, ground based C4I facilities and include acceptance and verification testing. Also, HEMP cost is based on 100-db protection. Many unit costs of facilities shown in this handbook already include shielding costs. Therefore, these costs should be used only where Tempest and Hemp shielding is not normally included in the building.

COMM - COMMUNICATION CABLES

Coaxial cabling costs are for the cables and installing them in existing conduits. These costs are only for the area in the facility that has cabling.

AFLD LIGHT - AIRFIELD LIGHTING SYSTEMS

Prices do not include support items such as regulators, control systems, vault or tower modification, emergency power, primary feeders, homeruns, and structures over 2m (6 feet) high. All costs related to construction of a complete airfield lighting system for the areas listed are covered in the prices for that system. The electrical power supply from the control tower to the system is also included.

RAILROAD

The price for railroads includes clearing, grubbing, excavation, subgrade compaction, 454gm (100 lb.) rails with joint bars and track bolts, crossties, tie plates, spikes, and ballast from 200mm (8") below the crossties to the top of the ties.

POL SYSTEM

Hydrant fueling systems/Automatic pressurized system: Two types of hydrant fueling systems are priced on a per outlet (OL) basis. The 2-pipe and 3-pipe systems are commonly found on Air Force installations. Included in the price is a 121m² (1300 SF) pump house, pumps, valves, fittings, electrical service, and storage and distribution system.

LIQUID FUEL STORAGE BULK ABOVE GROUND: Complete with foundations, dike and exterior coating. Floating roofs are not priced for the above ground POL tanks. Epoxy coating is priced separately.

UNDERGROUND VERTICAL STEEL TANKS: Complete with foundations, excavation, backfill and epoxy lining, but does not include pumphouse, pumps, or cathodic protection.

Supporting Facility Costs - FY2004

Thursday, January 24, 2002

SECTION VIII
SIOH, CONTINGENCIES, AND ROUNDING

SECTION VIII
SUPERVISION, INSPECTION, AND OVERHEAD (SIOH),
CONTINGENCIES, AND ROUNDING

SIOH

| | |
|---------------------------------|---|
| ARMY | 5.7% U.S. (CONUS) |
| NAVY | 6.0% U.S. (CONUS) |
| | 6.5% OCONUS (Alaska and Hawaii are counted as OCONUS) |
| AIR FORCE (United Kingdom only) | 2.5% |

CONTINGENCIES

| | |
|-------------------------------|--|
| 1. New Facilities | 5% |
| 2. Alterations | 10% |
| 3. Addition/Alteration (ADAL) | 5% if ADD is largest portion and 10% if ALTER is largest. |

DESIGNATED DOD CONSTRUCTION AGENTS
UNITED STATES

Department of the Navy

| <u>AFMC</u> | <u>AMC</u> | <u>ACC</u> |
|------------------------|--------------------|-------------------|
| Charleston POL sta, SC | Andrews AFB, MD | Myrtle Beach, SC |
| Norwalk POL sta, CA | Charleston AFB, SC | Shaw AFB, SC |
| Los Angeles AFB, CA | Travis AFB, CA | Barksdale AFB, LA |
| Sunnyvale AFS, CA | | |
| Los Angeles AFB, CA | | |

AFDW
Bolling AFB, DC

Department of the Army

The U.S. Army Corps of Engineers is the construction agent at all Air Force locations (with the exception of the UK), where the Navy is not the construction agent for the Air Force. This includes Alaska and Hawaii. The Air Force serves as it's own construction agent at all bases in the United Kingdom.

OVERSEAS

Department of the Navy

| | |
|---------------------|----------------------|
| Atlantic Ocean Area | New Zealand |
| Australia | North Africa |
| Caribbean Sea Area | Pacific Ocean Area |
| Iceland | (except Marshall Is) |
| Indian Ocean Area | Portugal |
| Italy | Southeast Asia |
| Newfoundland | Spain |

| Canada (except Newfoundland) | Japan |
| Canal Zone | Korea |
| Egypt | Marshall Islands |
| Europe (except Spain, Portugal, and Italy) | Middle East (including Southern Asia fm Turkey to Burma) |
| Greenland | Taiwan |
| Greece | |
| Israel | |

Department of the Air Force

United Kingdom

RULES FOR ROUNDING

Due to the inherent uncertainties in estimating costs, cost estimates should not indicate a higher degree of accuracy than is actually possible. As a result, programming documents should round programmed amounts, unit costs, and scope as follows:

| <u>If Programmed Amount (000) =</u> | <u>Round to the nearest (000)</u> |
|-------------------------------------|-----------------------------------|
| \$ 1 - 999 | \$ 10 |
| \$ 1,000- 4,999 | \$ 50 |
| \$ 5,000- 9,999 | \$ 100 |
| \$10,000-14,999 | \$ 200 |
| \$15,000-19,999 | \$ 500 |
| \$20,000 + | \$1,000 |
